OVERVIEW

Introduction

SPACELAB were commissioned to produce a tree assessment and report for the new key project under the draft City Plan, City to the Lake, for the Land Development Agency (LDA). This site is known as City to the Lake, West Basin.

This report follows the objectives of the brief being:

- *To quantify and assess the trees and stands of remnant vegetation located within the site area; and*
- *To identify and assist:*
 - *The health and amenity of existing trees and remnant vegetation;*
 - *Trees for retention in accordance with the ACT Tree Protection Act; and*
 - *Trees and significant stands of less mature trees deemed to possess potential contribution to urban amenity.*

The Tree Assessment Methodology developed by the LDA was used to assess the trees and stands of vegetation and all data was entered into the Tree Assessment Proforma supplied by the LDA.

Recommendations in this report will assist in the development of the site.

Figure 1: Project site

Site Description

The site is located between the foreshore of Lake Burley Griffin West Basin, and the major distributor road of Parkes Way in the suburb of Acton, ACT. The site is commonly known as Acton Park.

The site is envisaged to comprise:

- A new Canberra Aquatic Centre,
- A new National Cultural Institution,
- Revitalised waterfront public realm, including interpretive boardwalk and water gardens,
- Vehicular penetration and permeability, including direct extension of Marcus Clarke, and
- The West Basin Estate.

The extents of the assessment are defined in the assessment plans associated with this report. Refer DWG No: TA1-TA10. The site extent is also identified in Figure 2.

Figure 2: Project site – extent defined by dashed line.

Trees in this report are located along the shorelines and throughout the parkland that contains open space, a shared bicycle path, a series of open car parking lots, a futsal court, a building that houses a bike rental, and a ferry boat and paddle boat jetty and rental structure. The area is subject to special conditions outlined in the National Capital Authority's Lake Burley Griffin Management Plan.

TREE ASSESSMENT METHODOLOGY

The following information for each assessed tree is presented in this report.

Tree Number/Group:

A unique reference number is assigned to each tree or group of trees and described in terms of GIS co-ordinates. Each tree/group of trees is numbered and referenced to the Plan and Report as applicable.

Regulated Tree:

Is the Tree considered to be a Regulated tree in accordance with the *ACT Tree Protection Act, 2005*

Y – Yes

N – No

Registered Tree:

Is the Tree listed on the Provisional Tree Register or the Tree Register? Reference check to be undertaken by visiting

<http://www.tams.act.gov.au/live/environment/urbantreeprotectionintheact/acttreeregister>

If registered notate the unique reference number allocated by the Act Territory Government.

General Tree Data

Assessment Date

Date field assessment undertaken

Assessor

Name of field assessor

Tree Location

GIS location, ACT grid coordinates, Stromlo Projection, Easting's and Northings of tree position.

Species

Botanical and Common Name

Height

Height in metres

Canopy Spread

Canopy diameter in metres shown as the maximum crown width of the tree or group of trees

Trunk Circumference

For Single Trunks circumference in millimetres, measured 1 metre above ground level

For multiple trunks the cumulative total of each trunk in millimetres at 1 metre above ground level

Number of Trunks

For single trees: number of trunks at 1 metre above ground level;

For groups of trees: general average number of trunks.

Recommendation

Recommendation is based on the professional judgement by the **Arborist and/or Landscape Architect and/or Landscape Consultant** following evaluation of the overall components of the full assessment.

Retain/Manage	Retain and manage the tree
Or	
Remove	Remove the tree

ARBORICULTURAL CRITERIA DEFINITIONS

Each tree has been assessed with the following arboricultural criteria. The definitions of values presented on the assessment sheets is provided below:

Canopy Density:

Relative density of canopy foliage

- 3 - Full canopy (80% to 100%)
- 2 - Part canopy (20% to 80%)
- 1 - Sparse canopy (<20%)

Canopy Dead Wood:

Amount of dead wood in the canopy as a % of the canopy:

- 3 - 0% to 20% dead wood
- 2 - 20% to 60% dead wood
- 1 - 60% to 100% dead wood

Insect Attack:

Evidence of insect attack:

- 3 - None
- 2 - Moderate
- 1 - Significant

Disease:

Evidence of disease present:

- 3 - None
- 2 - Moderate
- 1 - Significant

Epicormic Growth:

Presence of epicormic growth:

- 3 - None
- 2 - Moderate
- 1 - Significant

Mistletoe:

Presence of mistletoe in canopy:

- 3 - None
- 2 - Up to 5 clumps (moderate)
- 1 - More than 5 clumps

Form:

Canopy balance and distribution - relative to the normal habit of the tree species:

- 4 - Typical of species
- 3 - Stunted
- 2 - Unbalanced/lopsided canopy
- 1 - Trunk lean approximately 30° or more off vertical

Age:

Age category:

- 4 - Juvenile
- 3 - Semi- Mature - Adolescent
- 2 - Mature
- 1 - Over-Mature - Senescent – limited life expectancy

Tolerance to Disturbance:

Tolerance to disturbance within the tree protection zone based on species characteristics and site conditions:

- 3 - High, tree species generally tolerant of some site disturbance,
- 2 - Medium, tree species that may tolerate limited site disturbance,
- 1 - Low, tree species generally highly sensitive to site disturbance.

Risk Potential:

Risk potential/structural integrity associated with trunk and major branches. Comment on the risk in the context of future land use if known and/or recommend incompatible land uses.

3 - Low risk potential

- good structural integrity with low risk potential
- may require minimal or no short term horticultural maintenance

2 - Medium risk potential

- poor branch unions, narrow angle branch forks or multiple leaders etc
- risk can be mitigated and managed by tree surgery and horticulture maintenance techniques

1 - Significant risk potential

- decay within trunk or major branches and/or
- prevalence of hollows or decay and/or
- depressed sections of the trunk indicative of underlying health issue and/or
- storm damage or physical and/or
- risk cannot be mitigated by extensive tree surgery or horticultural techniques

Health/Condition:

Overall health and condition of the tree based on arboricultural assessment of crown and trunk of the tree:

- 4: Excellent 2: Fair
- 3: Good 1: Poor

URBAN AMENITY CRITERIA DEFINITIONS

Each tree has been assessed with the following Urban Amenity criteria. The definitions of values presented on the assessment sheets is provided below:

Contribution to Existing Landscape Character:

What level of contribution does the tree make to the existing landscape setting?

- 3 - Significant
- 2 - Moderate
- 1 - None

Potential Contribution to Future Landscape Character:

If retained, what level of contribution does the tree(s) potentially have for future landscape settings?

- 3 - Significant – could provide significant landscape character
- 2 - Moderate
- 1 - None

Visual / Scenic:

Visual prominence and scenic quality of the tree when viewed from within and beyond the site based on its position in the landscape and its form, condition, spatial arrangement, health and size:

- 3 – High – Visually prominent landform and exposed to significant public viewing (either now and/or in the future)
- 2 – Medium - visually prominent location or existing exposure to public view
- 1 – Low – not exposed to existing public, scenic value important to future local urban development

Unique species:

Based on the rarity or commonness of the species in the region or growing at the extent or outside of its normal range and the abundance of the species within its geographic range:

- 2 - Rare
- 1 - Common

Habitat Quality:

Based on the potential to retain or attract native fauna:

- 3 - Provides significant habitat to native birds or arboreal animals either due to its abundance or ecological diversity or as a result of limited availability
- 2 - Ability to retain or attract native wildlife including invertebrates
- 1 - No habitat opportunity for native fauna or known to harbour exotic pests

Habitat Value:

Habitat value provided by tree e.g. considering nesting hollows, shelter, seed pods, nectar, roosts etc

High Value

- 4 - Food source or nesting hollows for endangered species - specialised
- 3 – Locally occurring habitat– non-specialised

Limited Value – Low

- 2 - No identifiable habitat – shelter only
- 1 - Potential for harbouring pest species

Cultural Value:

Does the tree have cultural/heritage value? If so is it documented or how is it known?

2 – High - Yes – describe (anecdotal/referenced)

1 – Low - None known

Social Value:

Does the tree possess social context e.g. is there community connection to its planting or location? And if so is it documented / how is it known

2 – High - Yes – describe (anecdotal/referenced)

1 – Low - None known

Scientific Value:

Does the tree possess scientific interest? e.g. genetic, stunted growth, curious habit, habitat, climatic range. If so how is it documented, or how is it known.

2 – High - Yes – describe (reference)

1 – Low - None known

Remnant Species:

Is the tree a remnant species?

2 - Yes therefore contributes to natural biodiversity (Highly Valued in terms of local ecology and genetics)

1 – No - i.e. planted native species, self sown exotic, planted exotic

LANDSCAPE TREE GROUPS DEFINITIONS

The assessment of landscape trees that are clearly identifiable as dense uniform landscape groups to be assessed as groups for their potential contribution to future urban amenity. The groups are to be considered and assessed on the same bases as individual trees.

3- An identifiable group of trees that when considered as a whole meet at least one of the values for Tree Quality Classification of Exceptional Quality.

2 – A clearly identifiable group of landscape trees that includes trees that meet the requirements for assessment under the Tree Protection Act, 2005 and has the potential to contribute to the future urban amenity.

1 – A clearly identifiable group of landscape trees that may include trees that do not meet the requirements for assessment under the Tree Protection Act, 2005 and has the potential to contribute to the future urban amenity.

TREE ASSESSMENT - ARBORICULTURAL ASSESSMENT RATING DEFINITIONS

Each assessed tree has been provided with an arboricultural quality rating. The Arboricultural Assessment is the culmination of the assessment of Arboricultural Criteria best fitting the following statements (see also Arboricultural Criteria).

E **Exceptional meets most or all of the following**

- Mature specimen
- Well balanced grand and/or outstanding appearance and stature
- Little or no evidence of:
 - insect or parasitic attack and/or disease
 - epicormic growth and/or
 - dead wood and/or
 - physical damage

H **High meets one of the following**

- Mature Tree specimen
 - Tree structure, appearance form and balance is considered typical
 - Little no evidence of insect/parasite attack, epicormic growth and/or dead wood
- Juvenile or adolescent specimen (or group of trees or regeneration) that does not meet the prescribed requirements of the Tree Protection Act which exhibits excellent form and health with potential to:
 - become a Regulated Tree; and
 - contribute positively to the landscape character / urban amenity of the place in the future

M **Medium Mature Tree specimen exhibiting some or all of the following characteristics:**

- Sparse or pale coloured foliage
- Epicormic growth and/or dead wood throughout the crown
- Evidence of some branch fall
- Less than desirable form

Or (meets this criteria)

- Juvenile or adolescent specimen (or group of trees or regeneration) that does not meet the prescribed requirements of the Tree Protection Act. This assessment may include tree(s) which exhibit some negative characteristics which, with cost effective maintenance and/or management these trees have the potential to become:
 - a regulated tree; and
 - contribute positively to landscape character and / or urban amenity of the place in the future

P **Poor Quality or Deteriorating Tree meets the following statement.**

Tree assessed as:

- limited life expectancy (less than 5-10 years) and/or
- limited habitat value; and/or
- significant risk potential with regard to:

- poor form, health and condition, significant die back or sparse canopy; and/or
- physical damage, disease, decay, susceptible to large limb drop, included bark forks etc

TREE ASSESSMENT - CONTRIBUTION TO URBAN AMENITY RATING DEFINITIONS

Each assessed tree has been provided with an Urban Amenity rating. The assessment of Urban Amenity¹ Assessment is the culmination of the Urban Amenity Criteria best fitting the following statements (refer also Urban Amenity Criteria).

E Exceptional Urban Amenity

A tree or well defined group of trees that meets at least two of the following:

- Significant Visual Prominence or Scenic Quality
- Unique Species – i.e. not common place to the Region
- Significant habitat
- Known Cultural /Heritage Value - referenced
- Known Social Value – referenced
- Scientific Value - referenced

(Note: as an example, a tree, may be considered “Exceptional” on the basis of scientific and known social value but be of poor form/condition and represent a significant hazard).

H High

A tree or well defined group of trees which may or may not attain the status of being a Regulated Tree that exhibit the following:

- good form, health and condition without significant defects; and
- where retained and managed is unlikely to present an unreasonable financial impost or public risk

M Medium

A tree or well defined group of trees that is considered to require expenditure with regard to its long term management to attain a High value and is assessed to be of little (if any) habitat value.

L Low

A tree of poor form, structure or health with little, if any, habitat value i.e. the tree is considered in fundamental decline or likely to represent a significant hazard in an urban context.

¹ Urban amenity is considered the form, texture, arrangement and appearance of landscape elements (in this case trees and stands of vegetation) that contribute positively to the character of a place.

TREE PROTECTION / MANAGEMENT FOR TREES TO BE RETAINED

Under the ACT Tree Protection Act (2005) a Protected Tree includes all Regulated Trees and those trees deemed Registered (i.e. a tree that has been included on the ACT Tree Register).

Tree Management Plans are required to accompany the Estate Development Plan for all Protected Trees. Schedule 1 of Notifiable Instrument N12010-586 outlines the guidelines for Tree Management Plans applicable to trees attaining the status of Protected Tree under the Tree Protection Act.

TREE MANAGEMENT ASSESSMENT DEFINITIONS

Each tree has been assessed with the following Tree Management criteria. The definitions of values presented on the assessment sheets is provided below:

Potential to Reduce Risk:

Are there arboricultural/horticultural works that can be carried out to reduce potential risks?

3 - Significant works – involving financial investment requiring commitment to long term remedial specialised techniques

2 - Moderate works –requiring commitment to regular horticultural/arboricultural treatment

1 - None – regular on-going management required long term but no obvious immediate management required

Potential to improve amenity value:

Are there arboricultural/horticultural works that can be carried out to improve the potential amenity value of the tree?

3 - Significant works commitment to regular ongoing horticultural/arboricultural maintenance required (pruning, shaping, spraying) etc to retain urban amenity

2 - Moderate works commitment to immediate (but not onerous) maintenance to enhance amenity

1 - None – occasional, regular and expected horticultural works may be required – not immediate

ASSESSMENT DATA

Refer to Appendix A

RECOMMENDATIONS

The area is a highly modified landscape. The soil and hydrology have been subject to major change. The lake has risen the watertable and the landscape work in the past moved soil and created a less natural profile.

The species planted on the site represent the suite of species used at the time and those capable of accessing the watertable, such as the *Populus nigra* which has done well, and form an attractive group. Several would not now be planted, including *Populus alba*, *Acer negundo* and *Salix* species.

Species such as *Pinus ponderosa* are increasingly prone to fungus and gradually die from the pathogen *Lophodermium canberrianaum*. W Stahl 1966. Tree 1836 has succumbed and tree 1837 will do so in the near future.

The amount of dead wood in the trees is very low in this very high use area due to a good maintenance program.

The use of very closely planted *Casuarina cunninghamiana* has resulted in many trees in the roadside screen plantings being spindly and unstable.

Three large trees (G9) are very close, and as a result, lean away from each other. If retained, they will require work to hold them together.

The *Ulmus carpinifolia* along Commonwealth Avenue are generally good and need to be retained for symmetry, although it is unclear how the recent increase in the Elm Leaf Beetle (*Pyrrhalta luteola*) will affect this species over the next few years.

The *Salix* species are for the most part, structurally unsound, and will pose very real problems in the future. Similarly, the *Populus deltoides* have a measure of visual impact but are showing decline.

The trees in the car parks are mostly *Eucalyptus nicholii* and *Eucalyptus mannifera* with some *Eucalyptus melliodora* and large *Eucalyptus maideni*. All of these trees pose real problems, particularly the *Eucalyptus nicholii* and the frequently dangerous large trees in the globulous group. Most are typical of plantings in car parks. Whilst not stunted they are not robust due to the hard surface.

The mixed linear plantings along the lake edge are quite poor and will pose problems in the future.

A small number of trees on the site have been rated (H) high in terms of arboricultural rating and one *Casuarina cunninghamiana* has been rated (E)exceptional. (Tree 1862).

Clearly this tree has done well in the conditions and has probably tapped the watertable.

The three Salix species numbered 1004, 1005 and 1006 at the lake edge are poor.

A number of other small trees such as Prunus cerasifera and Pyrus ussuriensis form groups of attractive foliage which adds to the overall appearance of the site but in the case of the Prunus cerasifera are not long lived and both are easily replaced with open rooted advance replants.

Overall, the trees on the site have little 'stand out' values either in the species selection or their health. However, the use of large numbers of Populus alba, Populus nigra and Casuarina cunninghamiana give a deceptive impression of a well treed landscape. As well, the use of willows along the lake edge fits with the proximity of the lake but have questionable environmental values.

Conclusion

Given the above comment we recommend that all weed species such as Populus alba, Acer negundo, the Salix species and known problematic species such as Eucalyptus nicholii be removed. Also trees in the globulous group are proving to be difficult to manage and this needs to be taken into account if the Eucalyptus maidenii are retained.

The trees given an (E) exceptional (H) high arboriculture value may be retained and the remaining trees only retained where they fit within the proposed developments.

It needs to be noted, that trees of this age and situation, given a high amenity value but low arboriculture value, will pose very real problems into the future.

A program to combat the Elm Leaf Beetle should be implemented to assist the longevity of the Ulmus species on the site and the maintenance work, clearly in evidence, be maintained.

NOTES / DISCLAIMER

This report is to be utilized in its entirety only. Any written or verbal submission, report or presentation that includes statements taken from the findings, discussions, conclusions or recommendations made in this report, may only be used where the whole of the original report (or copy) is referenced in, and directly attached to that submission, report or presentation.

Information contained in this report covers only those trees, which were examined, and reflects the condition of those trees at the time of inspection on 6th May, 2014.

The inspection was limited to visual examination, without dissection, excavation, probing or coring. There is no warranty or guarantee or expressed or implied, that problems or deficiencies of the subject trees may not arise in the near future.

The findings of this report may not necessarily agree with reports prepared by others, including the Government Conservator of Trees.

URBAN AMENITY ASSESSMENT PATTERNS

E EXCEPTIONAL QUALITY URBAN AMENITY TREE - REGULATED
A TREE OR WELL-DEFINED GROUP OF TREES THAT MEETS AT LEAST TWO OF THE FOLLOWING CRITERIA:

- UNUSUAL SPECIES
- SIGNIFICANT SIZE
- KNOWN CULTURAL / HISTORICAL VALUE
- SCIENTIFIC VALUE

H HIGH QUALITY URBAN AMENITY TREE - REGULATED
A TREE OR WELL-DEFINED GROUP OF TREES THAT MEETS AT LEAST ONE OF THE FOLLOWING CRITERIA:

- GOOD CANOPY HEALTH AND CONDITION WITHOUT NEED FOR MAINTENANCE
- WHERE PLANTED AND MANAGED IS UNLIKELY TO IDENTIFY AN UNDESIRABLE PHYSICAL IMPACT ON PUBLIC USE

M MEDIUM QUALITY URBAN AMENITY TREE - REGULATED
A TREE OR WELL-DEFINED GROUP OF TREES THAT IS CONSIDERED TO BE OF MODERATE VALUE AND IS ASSESSED TO BE OF LITTLE IF ANY AMENITY VALUE

L LOW QUALITY URBAN AMENITY TREE - REGULATED
A TREE OR WELL-DEFINED GROUP OF TREES THAT IS CONSIDERED TO BE OF LITTLE IF ANY AMENITY VALUE

N NON-REGULATED

NR TREE NOT PRESENT ON SITE INDIVIDUALLY REMOVED
